

First National Bank of the Rockies Implements Adeptol Viewer within their existing Microsoft Sharepoint intranet implementation

First National Bank of the Rockies (FNBR) traces its roots back to the Old West when it was chartered in 1904 as The First National Bank of Meeker. For decades the bank has stood strong, and is one of only a few in the area to survive the Great Depression and the speculative boom and bust cycles of the region's oil shale activities. In the early 1990s the First National Bank of Meeker, along with First Federal Savings & Loan in Craig, was acquired by a group of local investors. The name was changed to First National Bank of the Rockies to reflect the bank's growing regional presence. Today, First National Bank of the Rockies continues the tradition of serving the needs of its customers in new and innovative ways. These include a state-of-the-art check image system, 24-hour telephone banking, and convenient Internet banking.

Problem

First National Bank of the Rockies had been using Microsoft Windows SharePoint Services 3.0 internally as an intranet based application for document sharing, collaboration and as a document storage repository. Sharepoint helped connect people with information and resources they needed and organized the documents. But the problem was, as documents were growing in the Sharepoint repository, end users had to download each document to view them and there was no quick

preview functionality either. Though Sharepoint was acting as a great tool to ensure integrity of the documents, there was no way to allow the end users to navigate through these documents without downloading them on their machines or computers first. Also it was necessary for end users to have native viewing application like MS Office, PDF reader etc installed to view the downloaded documents.

Solution

FNBR choose Adeptol's AJAX Document Viewer Professional Edition product to integrate within the existing Sharepoint implementation and to take the user document viewing experience to a new level. AJAX Document Viewer's high speed viewing with a built-in information rights management module, security and scalability features easily integrated with the Sharepoint and helped FNBR maximize the value of their existing document management information infrastructure investment. This resulted in lowered costs & risks and ensured optimal performance and agility for rapid response to business demands. AJAX Document Viewer viewing component integrated within Sharepoint not only helped create intuitive digital experiences, but also allowed the users to use the information quickly to collaborate, make decisions, and automate the processes.

"Adeptol Document Viewer allowed our users to access multiple documents & images through a single universal application and enabled quick document viewing within Sharepoint with no infrastructure changes. Not only was the deployment quick but backed by great support from experienced professionals." - Jim Neff, IT Management, First National Bank of the Rockies.
