The Big Picture

Web based online document viewer

More than 100 Document Types Support

Not a Virtual Printer Based Solution

Built on Multi Tenancy Concept

No need for office or other software's installed

Ability to convert documents into PDF

Web Based Document Viewer

Ajax Document Viewer is a web based online document viewer and can be embedded into any web page or linked from any page. For most companies, getting software products to market on time, on budget, and with the right features and functionality is always a challenge. But it doesn't have to be.

AJAX Document Viewer is an online document viewer that uses AJAX and Flash technology to create fast rendering of documents on the fly. The main focus of the viewer is the ability to be embedded in any application and allows content publishers, bloggers and individual users to publish content and embed the documents in their web pages while still maintaining the integrity, consistency and look & feel of the document.

AJAX Document Viewer can help you retain your customers and streamline your content integration efforts. Leverage Web 2.0 technologies to get a completely scalable content viewer that easily handles any type of content in virtually unlimited volume, with additional capabilities to support high-volume transaction and archive environments.

Features

More than 100 Document Types Supported

Support for more than 100 Document Types including Microsoft Office 2007 documents (docx, xlsx, pptx), Office 2000 (doc, xls, ppt), Open Office (odt, sxw, ods, sxc, odp, sxi, odg), Images (jpg, bmp, png, gif, tiff), Adobe PDF, RTF, CSV, TXT etc

Conversion of Microsoft Office documents to PDF & SWF on server

AJAX Document Viewer allows an unlimited number of users to convert any format of Microsoft Word, Excel and PowerPoint documents to PDF & SWF on a server. Quick and easy conversion of most of the document to an Adobe® Flash® (SWF)

No need for installation of MS Office or Adobe Software

All reading, access and conversion of documents is done within the server resulting in no need for licenses for Microsoft Office, Adobe Acrobat or other softwares.

Not a Virtual Printer Based Converter

AJAX Document Viewer is not a virtual printer based server, which means no installation of a virtual printer on the server. A virtual printer based converter needs to spool the documents and queue all the documents for conversion resulting in a single document conversion at a time. AJAX Document Viewer is based on Multiple Tenancy Concept resulting in faster conversion rates and performance as multiple users can access the server at the same time and get various documents converted simultaneously.

Faster Conversion

AJAX Document Viewer is based on a Multiple Tenancy Concept and hence is significantly faster than other products with similar functions.

Conversion of documents to PDF

Documents can not only be converted to SWF but also to PDF, this offering your users not only the ability to view the documents in a web based environment but also to download the documents in PDF form.

Easy System Integration

AJAX Document Viewer Server provides easy system integration with web applications, content management systems, and other software. Integrate the server directly with your application and call Java Code directly from within your code. Easily embed your documents in web pages and publish them on the Internet.

Real Time Conversion & Viewing

Allow your users to view the documents when they want. The documents can be rendered in real time and made available to the users for viewing using the AJAX Document Viewer.

Ease of Use

View any type of content more precisely and efficiently with the an easier to use interface. Easily set up and integrate with other enterprise systems, solutions and applications.

Business Continuity

Configure and deploy to ensure high availability, reducing or eliminating the impact of interruptions to system availability.

Platform Neutrality

Support a broad range of Operating Systems and Browsers without worrying about additional QA and resource costs.
